FOUR FEET ORE IN

THE COLUMBUS EX.

PAST YEAR AND COPPER MINING

Many Items Going to Make 1910 a Wonderful Era for Industry.

TONNAGE HAS BEEN GREATLY INCREASED

Millions of Dollars Coaxed From Hiding Places to Help the Country.

The year 1910 will enter history as the most remarkable the world has ever experienced. There are many items that make this fact unquestionable, but were it only for the success with which the budding producers coaxed out reluctant millions during a period of industrial depression and extreme financial timidity, money required for the development of mines, the erection of mills and smelters and railroads, money which brought a far happier season to scores of separate important industries of the land than would have been the case, were it only for this 1910 deserves credit and from thousands all over the country. It was a year of mine development and

it was a year of mine development and quipment, companies placing an unnaralisied chanage of copper ore into developed form, although no big copper camp was discovered during the year. It was a year of surprises. For instance, one proposition, the Chino, little more than a prospect on January 1, 1910, closed the year with about 32,000,000 tons of developed copper ore, having added to its resources at the rate of almost 2,000,000 tons a month. There was a time when a mine with 2,000,000 tons of ore ahead was considered good enough.

The year witnessed the Ray Consolidated round out its resources by the 80,000,000-ton measure; the Nevada Consolidated with over 41,000,000 tons; the Miamit and inspiration with close to 20,000,000 tons each and several other properties brought into the factor column which were little thought of at the first of the year.

which were little thought of at the first of the year.

The year saw the capitalization of the Anaconda company greatly increased for the absorption of nearly all the Amalgamated Butte organizations: the revamping of the Butte mines for more economical, future production and the substitution of electrical for steam power throughout the camp. It has likewise witnessed the bringing to light of a score or more of new copper propositions in the lake country in sections heretofore devoted to purely agricultural or other purposes, and the expenditure of millions in the purchase, equipment and development of these mines.

The year witnessed the consolidation of numerous copper producers, continually

numerous copper producers, continually tightening the limits of production con-trol, the establishment of a truce or peace trol, the establishment of a truce or peace between the major producers which promises to cuiminate in a permanent and harmonious working agreement for the future protection of the industry. It was a year of unparalleled profits in copper mining in spite of the prevailing low price of the metal. The year witnessed a rate of consumption that permits the new year of start with only one month's stupply of metal in the domestic surplus and with nothing but continued industrial depression standing against even greater red metal prosperity throughout 1911.

PLANETARY TUNNEL WORK GOING AHEAD

Company at Park Valley Continues Search for Gold Ore Shoots.

William H. Weyher, president of the Planetary Mining company of the Park Utah, mining district, has returned to Salt Lake after spending several weeks at the property. Mr. Weyhe and associates have been operating the Planetary for a long time, having expended close to \$40,000 in sending in

pended close to \$40,000 in sending in various tunnels, shafts and other workings in search of the bodies of gold ore deemed certain to exist there.

The main work at present is centered on the long tunnel, which is in some 200 feet. This tunnel is following the vein, making for the point where connections eventually will be made with the main eventually will be made with the main shaft, the tunnel level being about 325 feet deeper than the collar of the shaft. The management at this time is bringing some gold values to view, assays running anywhere from 40 cents to \$2 or more per ton, but as the ores make with-

running anywhere from 40 cents to \$2 or more per ton, but as the ores make within the vein in shoots, no large extent of commercial ore is expected until this system of shoots has been developed. This company has done a great amount of work, and the officials are positive that the present programme will be productive of results.

Park Valley, states Mr. Weyher, is very quiet, although many owners are doing their regular assessment work. Just recently the Susannah company ran its Lane slow-speed mill for forty-two hours, cleaning up about \$1000. This mill will be set in operation again as soon as

Production Exceeded That o Year Before by Rather Small Margin.

MORE ACTIVE IN MINES OF COUNTRY

Available Metal Estimated

Exceed That of the Year

Before.

An estimate of the production of refined lead in the United States in 1910 has been compiled by C. E. Siehenthal of the United States in 1910 has been compiled by C. E. Siehenthal of the United States geological survey, from reports made by all lead smelters operating in the country during the year. These reports cover the actual production for the first ten or eleven months of the year, and from the figures of production given below are made up without change. The statistics of exports, imports, and lead remaining in warchouse have been taken from the records of the bureau of statistics for eleven months the figures for the remaining month liaving been estimated.

The statement shows that the lead-smelting industry had on the whole a smelting industry had on the whole a smelting industry had on the whole a smelting industry had on the whole as melting industry had on the whole as melting industry had on the whole a smelting industry had on the whole as melting industry had on the whole as the first ten or whole as four feet in winters in the whole as first ten or selection. The manifum shipping class. The tunnel crosscuts this fleven feet in winters in which the minimum shipping

them the figures of production given below are made up without change, or cently the Susannah company ran its Lame slow-speed mill for forty-two hours, cleaning up about \$1000. This mill will be set in operation again as soon as spring affords the desired quantity of water for the management. Park Valley, with the loosening up of purae-strings, should be among the busy camps of the state during the coming year.

STOCKS HOLD STRONGER PRICES ON WEDNESDAY

Alshough there is no material increase in the trading on the local exchange, the lashence of selling orders permits the leading issues to retain very satisfactory price levels. Wednesday especially being a very satisfactory day in this regard. The total sales were 57,255 shares of slock the market value of which was \$11,362,37. silverized lead of fereign origin compressed by 9,686 fons, as compared to 102.857 tons in 1909. The production of soft lead from Mississippi valley ores is estimated at 161.910 tons, as compared with 151.231 tons in 1909. This estimate indicates that Missouri retained her first place among the lead-producing states. The limit fligures for production of soft lead in 1916 are likely to silew an increase given above, because the argentiferous lead smellers and refineries undoubtedly treated more or less soft lead or from the Mississippi valley which is not taken in account as such in their estimates for 1910.

The imports of lead in 1910 are estimated at 47.111 short tons of lead in ore, valued at \$1.728.507; 57.47 tons of and 365 tons of chined lead valued at \$20.8172—a total of 108.268 tons, compared with 144.81 tons in 1969. Of the 1910 imports, 90.400 tons, or over 85 percent, came from Mexico. The exports of foreign lead (lead of foreign origin smelted or refined in the United States) show a decrease of about 16 per cent, being estimated at 7.2345 tons, valued at 25.505,365 as against 82.505,365 as aga

GOLD OUTPUT FALLS OFF ALL OVER WORLD

WASHINGTON, Jan. 4.—Production of gold fell off all over the world during 1910, according to a preliminary estimate prepared by George E. Roberts, director of the mint. Mr. Roberts is of the opinion that any possibility of any embarrassing over-supply of gold, with the atlendant rise in prices which economists predicted to go with it, has been passed.

More than \$96,000,000 in gold was mined in the United States during the year. Africa led the world with more than \$175,000,000. Australia was third with \$65,000,000.

California regained first place among California regained first place among, the gold-producing states, which she had a lost the development of dredge mining, to the development of dredge mining. Alaska showed a falling off.

The total silver reduction of the United States during 1910 is estimated at 56,000. 900 fine ounces, of which Montana led with II,000,000 and U(ah a close second.

ANOTHER FURNACE

Well With Third Furnace

Everything indicates that the manage nent of the United States Smelting. Refining & Mining company at Kennet Cal., has made rapid strides in the task Cal., has made rapid strides in the task of bringing the copper baghouse system to the desired state of perfection, for, on returning yesterday from California, General Manager G. W. Heintz stated that the baghouse was now taking care of three furnaces without any mishaps or difficulty whatever, where heretofore the management had been utilizing but two furnaces with the same baghouse coulpment.

ment.

While in California, Mr. Heintz scent some time at the Needles mill and smelter of his company, the 250-ton concentrating plant having been put into successful operation a short time ago. The United States company is the owner of the Tennessee, Banner and Champion mines in the Chloride district, in which a large amount of development work is being done. The smelting plant has two furnaces now in readiness to treat its oring done. The smelting plant has two furnaces now in readiness to treat its own and the surrounding custom ores. These are two items which, during 1910, were in course of construction, and as a consequence drains upon the United States company, and both enterprises are now in a position to become -rofit earn

BULLISH TURN MAY NOT BE PERMANENT

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-

Paine, Webber & Co. letter, Boston—Trades during the early hours showed a continuance of yesterday's confidence, but in the late dealings the demand for stocks ceased and scattered sellling depressed prices all through the local list. The Calumet & Hecla consolidation is still, creating considerable thought and the stockholders of the subsidiary companies have not yet made up their minds as to the best course to pursue. No effort is being made toward manipulation in any of the stocks, and the market in all of them is practically bare of offerings. Copper Range was unusually strong today and this property is daily gaining friends as the result of the failure and uncertainty regarding several of the other coppers. Webber & Co. letter Boston

uncertainty regarding several of the other coppers.

Logan & Bryan stock letter, New York
—Although operations for the advance were conducted extensively during the greater part of today's session, it was noticeable nevertheless that offerings showed a disposition to increase as higher levels were attained. The increase in the outside inquiry hardly met expectations and professionals dominated the action of the market. Demand money rates the outside inquiry hardly met expectations and professionals dominated the action of the market. Demand money rates were relatively easy in the forenoon and later became firm, but the tendency of same did not influence sentiment. London was reported as being a moderate selier throughout the session which rather indicated that foreign inquiry for our securities has not been a factor in connection with the recent upturn. The opinion is expressed in good circles that the conservative element is not in favor of bullish demonstration at this period, particularly as marked expansion on the loan account would do much towards mullifying the good effects of the adjustment now in progress in the banking situation. If the foregoing is true, it is not unlikely that the advancing tendencies displayed of late will be of short duration, especially as during the next few weeks various matters of prime importance will receive greater consideration than heretofore.

Gallagher, New York, says: Today's market opened and held strong throughout the day, though the strade was dull. Nevada Hills sold up to 22 on Philadelphia buying. In the silver stocks Mc-Kinley was the strong feature, selling at 17-16.

Hornblower letter, Boston—The Boston copper market had a strong undertone

I 7-16
Hornblower letter. Boston—The Boston copper market had a strong undertone today and although trading was on a limited scale, prices showed fractional gains. There was some hesitancy shown when the New York market halted, but there were no stocks pressing for sale Sentiment is bullish and it is the better that purchases made on soft spots will be the sentiment of the sentiment is bullish and it is the better that purchases made on soft spots will be the sentiment in the sentiment in the sentiment is sentiment.

Sentiment is bullish and it is the belief that purchases made on soft spots will return good profits, although the improvement will be gradual. Close was sleady, with a fair demand.

New York Son: There was a little irregularity in the general trend of prices. Steel was the active leader and its course was regarded with much interest because of the announcement of the resignation of their president. Stocks sold off during the last hour. The recession was not accompanied by any very active selling and seemed to be little more than the consequence, of the fairly large supply of stocks furnished in the previous hours.

BUTTE AND LONDON IS VERY HARD UP

Enclosed with the announcement that the actual stockholders' meeting of the Butte & London Copper Development company will be heid in Butte on January 17, Secretary W. E. Reynolds has given a statement for the benefit of stockholders, which reads as follows:

Through the courtesy of yourself and other stockholders, the company held a meeting on the 125th inst. having sufficient proxies, and borrowed \$10,000 from the Miners' Savings bank of Butte, giving them a mortgage on its property. The judgment, including interest and court costs, amounted to \$16,852.31. The company paid the difference from its treasury and has since received \$5000 from the Frankfort Marine Accident & Plate Glass company, whose contract provided that no insurance could be paid until the judgment was satisfied.

Overtures have been made the company for forty acres of its surface ground for townsite purposes. Ten thousand dollars should be realized from that source in the next few months. The company may decide to sell its steam machinery plant. It should bring about \$8000, There are several electric power lines reaching this city and as electric power is some 50 per cent cheaper than steam it is no longer profitable to operate with the latter method.

RILLION COALITION AT

BULLION COALITION AT STOCKTON HAS STRIKE

There was a very well defined rumor current yesterday to the effect that the Bullion Contition company of Stockton, Utah, has found a very gratifying body of shipping silver and lead ore on the Honerine tunnel level. This ore, it is stated, has widened out from about 2 feet to 8 feet, and some assays run extremely high in lead. This is the same body of ore, it is thought, as that found several months ago on the 800-foot level, several months ago on the son-foot level, be in charge of H. C. Morey. body of ore, it is thought, as that found several months ago on the 800-foot level, and this gives a very much greater vertical depth, proving the continuity of the resources beyond question. The company the first of the year took over the old Honerine, Honerine Extension and several other mines of Stockton, since which time the company has been actively at work.

SIOUX CONSOLIDATED LOOKS PROMISING WITH DEPTH

Reports have it that when Manager Loose submits his annual statement to shareholders, the Sioux Consolidated property will be shown to look extremely promising with depth. This is considered especially true at the northern part of the property, at which point a little south and east of the shaft and below the 450-foet level the ore gives every indication of going down strong. This ore it is understood, as shipped is worth close to \$500 per car. There is a good tomage still available in the visinity of the Colorado Mining lines for shipment.

HAPPY AND HEADIM.

Why let the children take chance of eatching cold or possible pneuments while in search of exercise and amuse mont? The Auditorium roller rink to Richards street is steam heated and his close to \$500 per car. There is a good tomage still available in the visinity of the Colorado Mining lines for shipment.

The everlasting girl question is easily and entirely solved by the insertion of a little want "ad" in The Tribuns Bell nhone 5200. Ind. 360.

CALUMET AND HECLA RETAINS ITS PRESTIGE

Thompson, Towle & Co. say that:
The Importance of the examinate work undertaken by J. Parke Channing for the Calumet & Hecla is attested by the fact that he was paid \$25,000 for in three weeks' work in connection with Calumet & Hecla infrairs.

It is noteworthy in Calumet & Hela operations that notwithstanding the exper contents of the rock have been stadily declining from 45 pounds to \$5 pour per contents of the rock have been stadily declining from 45 pounds to \$5 pour per condition, and is due largely to the excellent management of James Mr. Naughton, who received his mining election largely in the iron mines of the northwest, in the depressed period were every cent counted in the manipulation if iron ores, and this was the education while enabled him to meet the declarate values in Calumet & Hecla rock and my his costs down to a figure to permit eleas large dividends upon rock yielding 5 pounds copper to the ton as was paid when the rock yielded 45 pounds to the

JOHNSON AND AMES IN A NEW PARTNERSHIP
